Sustaining Mobility During Boston's Central Artery/ Third Harbor Tunnel Project

Presented by:

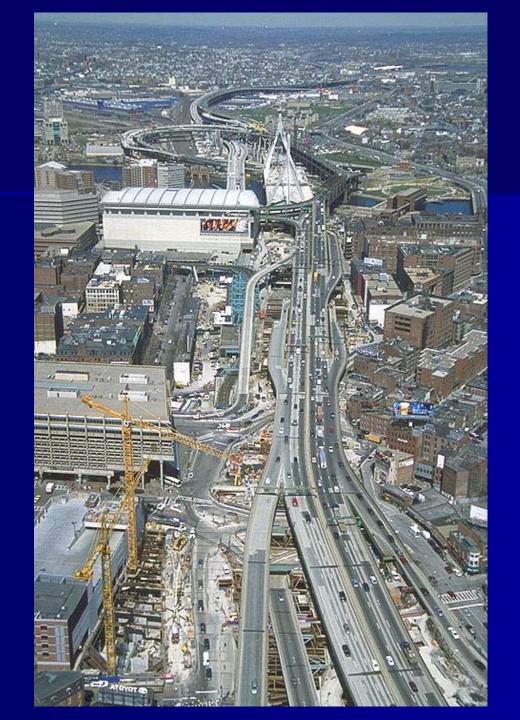

Jim Gillooly, Deputy Commissioner Boston Transportation Department

Boston's Central Artery/Third Harbor Tunnel Project

- Project Description
- Mobility Goals
- Mobility Challenges
- Strategies
- Tools and Tactics
- Results

Central Artery/Third Harbor Tunnel

Project Description: Central Artery/Third Harbor Tunnel

- Elevated Central Artery designed for 75,000 vehicles per day when opened in 1959
- Carrying 190,000 by early 1990s
- Traffic jams projected to last 16 hours a day by 2010
- Cross harbor tunnel at inadequate

Central Artery/Third Harbor Tunnel

Map at Completion

- I-93 Central Arteryrebuild 3.5 miles (1.5 miles tunnel)
- I-90 MassPike
 extended 3 miles
 (2.0 miles tunnel)
 to Logan Airport
- 4 major highway interchanges

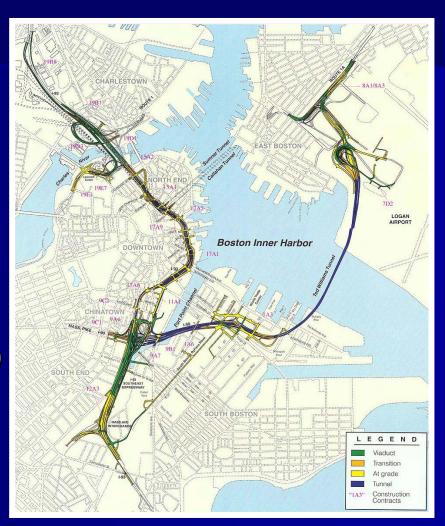

Central Artery/Third Harbor

Tunnel

■ 161 lane miles

7.5 mile corridor, half in tunnels

- 4 major highway interchanges
- I-93 Central Artery –
 245,000 ADT by 2010
- I-90 Ted Williams
 Tunnel 98,000 ADT
 by 2010

Mobility Goals

- Roadway Traffic
- Public Transit
- Pedestrians
- Abutter Access
- Tour Busses and Trolleys

Mobility Challenges

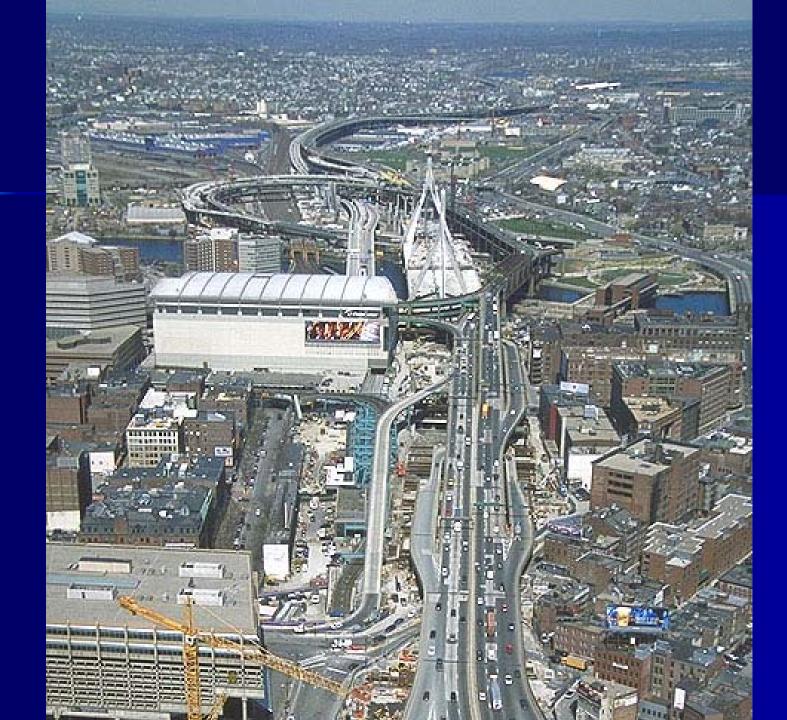

- Building tunnel under operating elevated highway
- Transit lines and commuter rail hubs crisscross project work zones
- High volume pedestrian corridors
- Construction adjacent to homes, parks and businesses
- Tourists flock to areas adjacent to CAT corridor

Mobility Challenge:

Central Artery/Third Harbor Tunnel

Aerial Perspective from above the Fleet Center

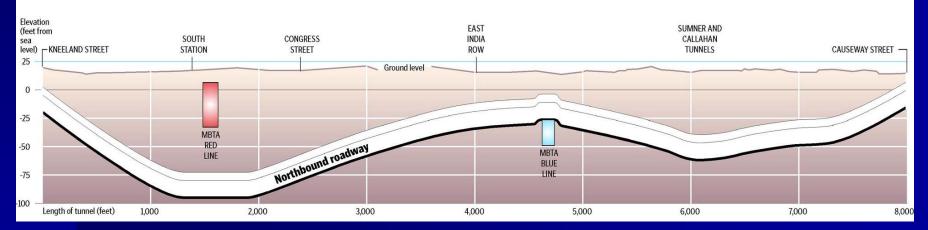

Cross-section of the Depressed Central Artery

The subterranean Central Artery must dip deep under the MBTA's Red Line at South Station and rise over the Blue Line near Aquarium Station.

Since 1988, some 1,600 test borings – from 20 to 200 feet deep – have been taken in preparation for building the Ted Williams Tunnel and Central Artery portions of the Big Dig. Boston was punctured about every 100 feet along the path of the project.

NOTE: Slopes appear steeper than they will actually be because horizontal and vertical axes have different scales.

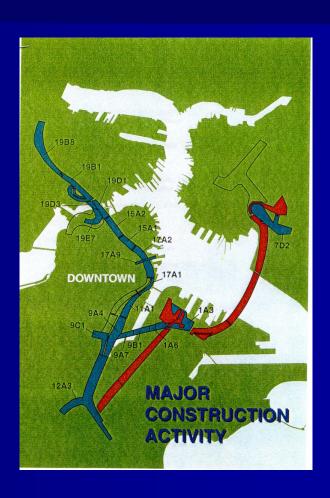

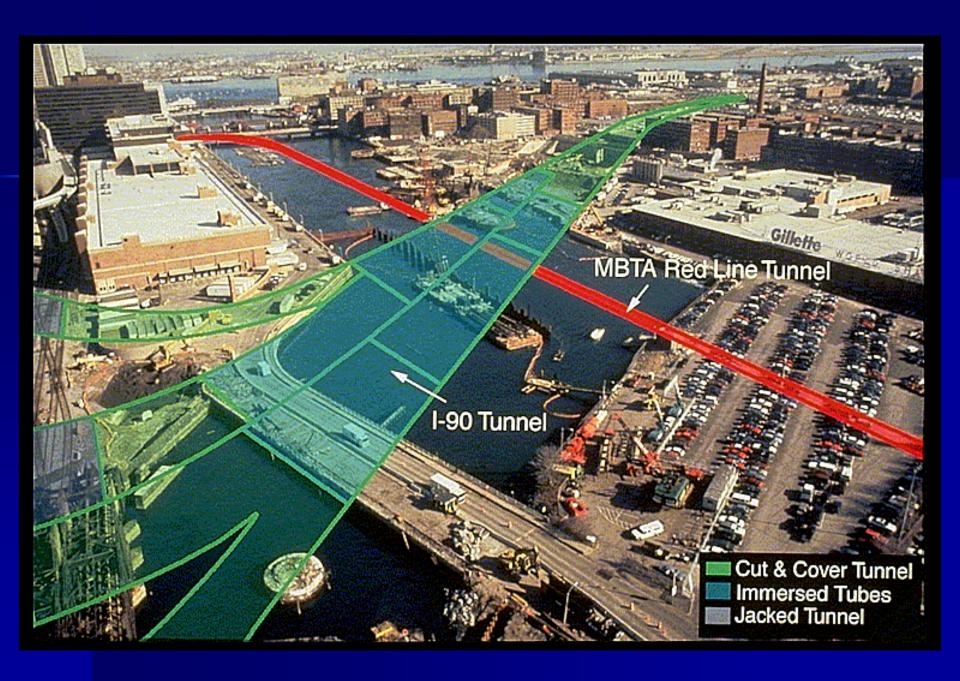

Mobility Challenges

- 16 million cubic yards of dirt moved
- 541,000 truckloads
- 3.8 million cubic yards of concrete
- 26,000 linear feet of slurry walls up to 120 feet deep
- 150 cranes project wide at peak construction
- 29 miles of utilities moved

Mobility Challenges

- 5,000 construction workers at peak
- 118 separate construction contracts
- \$3,000,000 work per day at peak
- Multiples impact zonessimultaneously

Strategies

- Careful Planning
- Innovative Engineering
- Comprehensive Coordination
- Integrated Public Outreach
- Tri-partite Partnership

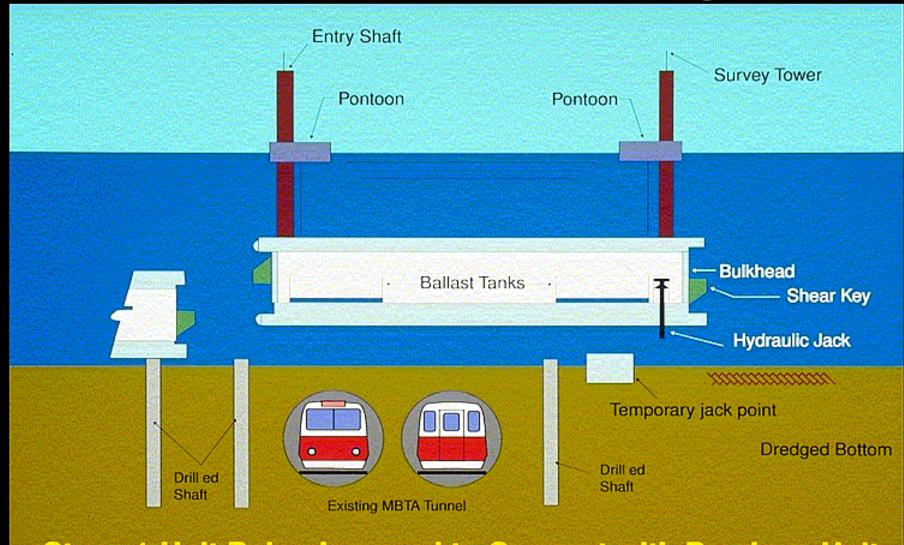

Strategy:

Mobility Challenge:

I-90 Crossing Fort Point Channel and Red Line MBTA Red Line Tunnel I-90 Tunnel Cut & Cover Tunnel Immersed Tubes Jacked Tunnel

Strategy: Fort Point Channel Crossing

Stage 1-Unit Being Lowered to Connect with Previous Unit

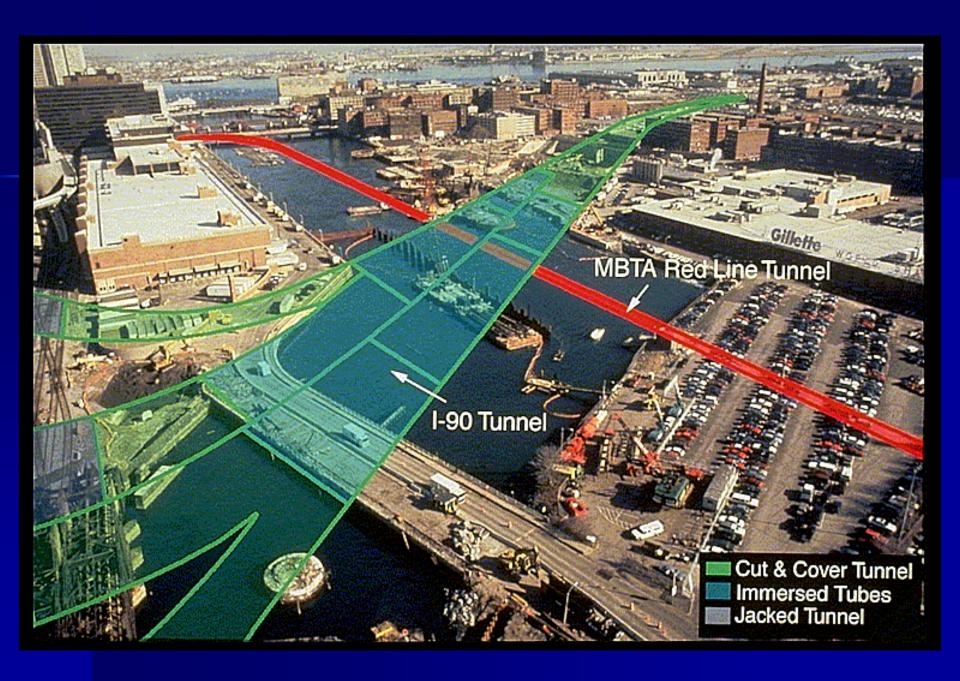

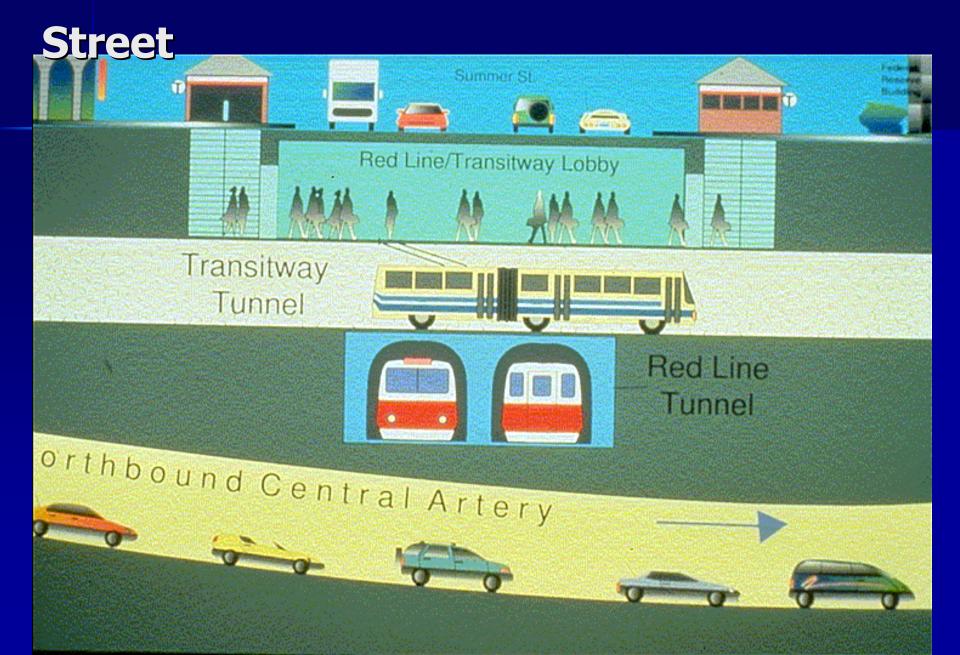

Fort Point Channel July 2001

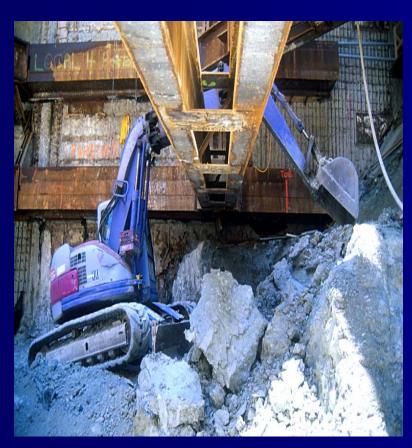

Modility Challenge:

Multilevel Construction Below the

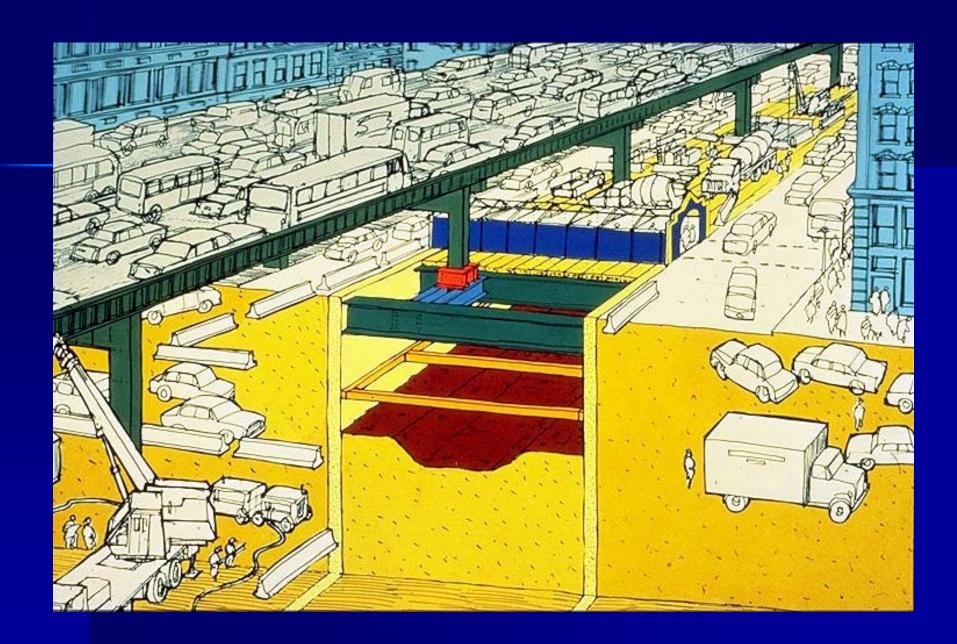

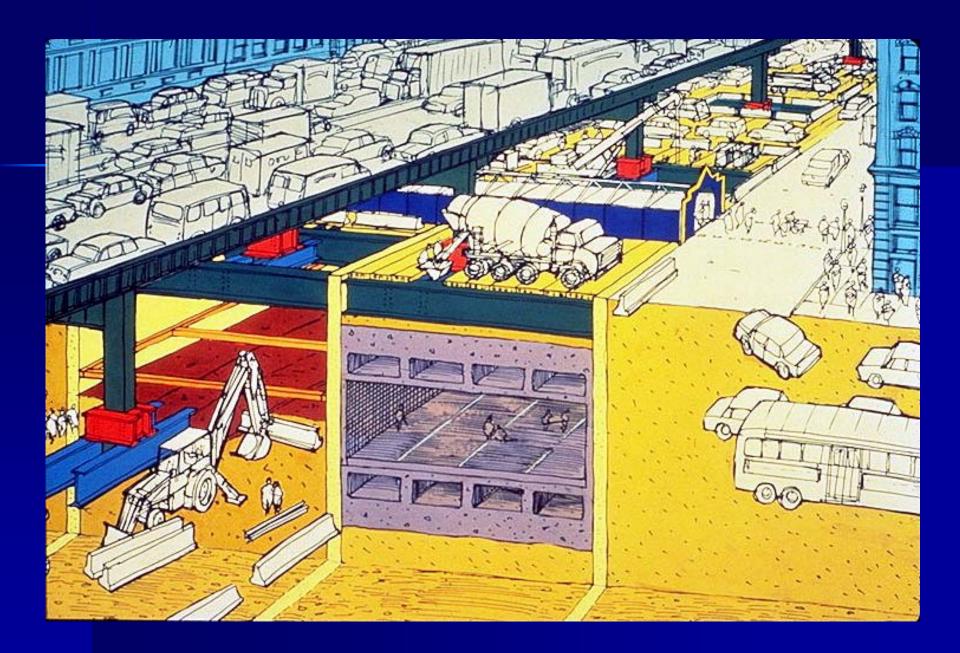

Mobility Challenge:

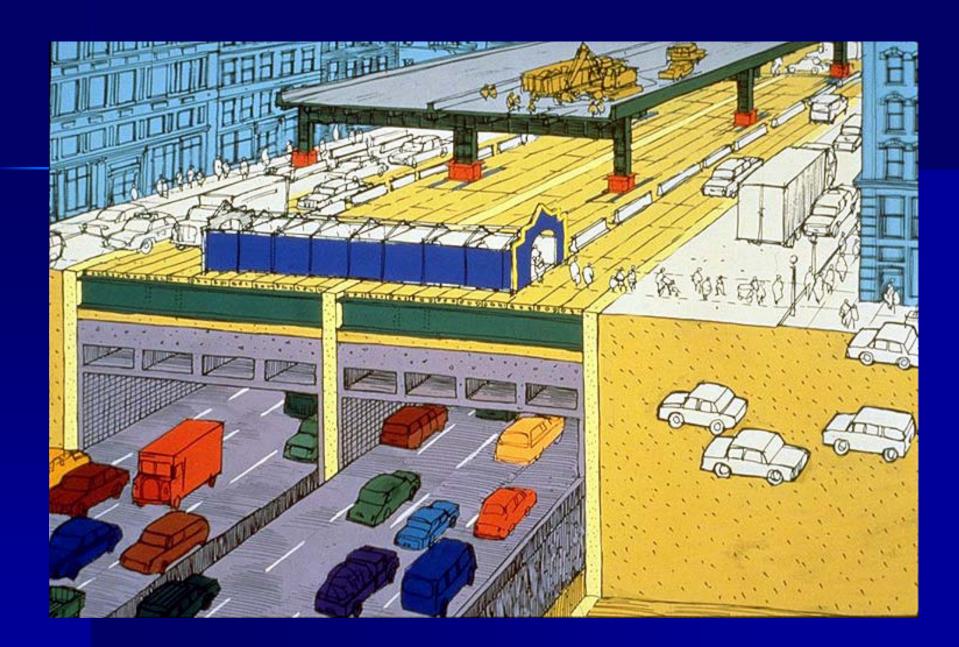

Operating a Highway Above

Tools and Tactics

- City and State Agreement
- City's Central Artery Team
- Traffic Alerts and Advisories
- Experimentation
- Intelligent Transportation Systems

Tools and Tactics:

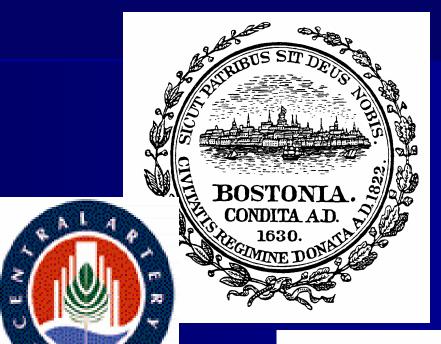

City Central Artery Team

- Coordinated Decision Making
- Resources
- Freedom to Innovate
- Customized Permitting

Tools and Tactics:

Intergovernmental Partnerships

Cooperation across Agencies

Tools and Tactics: Tripartite Planning

- Artery Business Committee
- North End/Waterfront Citizens Advisory Committee
- Tourism Industry

Tools and Tactics: Planning Traffic Changes

- Multi year traffic management plans
- Adapting to changes in environment
- Manage the contract boundaries
- Traffic alerts and advisories
